EXPERIENCE

Marshall is an accomplished restoration manager with 15 years' experience in the restoration and reconstruction industries. His firsthand knowledge and accredited business acumen bring valuable insight to catastrophic complex projects in addition to recovery planning. Having coordinated large-scale emergency response teams, engineer crews, and subcontractors, he directed the scope of work with carriers, 20+ crews of consultants, and provided mitigation oversight for hundreds of scenarios.

Acting as liaison between syndicate clients, carriers, municipalities, government authorities, third parties, and the insured, Marshall understands all angles of the restoration process and operates to ensure minimum business interruption. He is proactive in his communication and keeps a universally understood expert budget and scheduling among all parties at stake.

2014 to 2017
- First Call Restoration, Divisional Manager
2013 to 2014
- SERVPRO, Estimator / Project Manager
2009 to 2013

FEATURED PROJECTS

- **Hurricane Beryl, Wedge Tower - 2024**
With over 400 curtain wall panels that suffered catastrophic wind damage, the building's offices and suites required our team of 20+ consultants to assess and estimate damages to a 43-story office tower valued over \$10M. Due to damaged interior finishes, including several floors of granite and marble wall and floor restoration, Marshall created oversight of scheduling for mitigation, restoration, and construction crews through completion of project.
- **Foxland Crossing HOA, Galatin, TN - 2023**
Marshall worked with residential committee HOA to assess and estimate tornado damage, valued at \$3M+, with extensive damage sustained to 46 multi-family housing structures. Each of those buildings included 4-5 two-story units needed extensive interior repairs along with roof damage. Using MEWP as well as engineer and roofing crews, our team worked closely to mitigate safety and environmental concerns while inspecting 46 roofs. This first-hand research led to replacing.
- **FedEx Warehouse, Punta Gorda, FL - 2022**
At 90% completion, this builders' risk policy required an inspection and estimated damages to a 250,000 sq.ft. warehouse, which sustained substantial wind damage due to Hurricane Ian. Valued at \$2.5M, damages included exterior, roof, HVAC, and interior finishes. Environmental impacts of the project also included erosion control due to earth movement and retention pond remediation. Marshall was responsible for oversight of several crews including mitigation and construction through project completion.
